

4-Post Rack-Mount Installation Kit for Select Rack-Mount UPS Systems, Side Mount

MODEL NUMBER: AL-84120

Highlights

- Supports UPS systems in EIA-standard 4-post racks
- Supports up to 250 lb.
- Compatible with mounting depths of 16.5–21.5 in.
- Leaves front and rear mounting holes free for equipment
- Includes rack-attachment hardware for square-hole mounting

Package Includes

- (2) L brackets
- (8) M6 screws
- (8) M6 cup washers
- (8) M6 cage nuts

Description

The AL-84120 4-Post Rack-Mount Installation Kit supports heavy UPS systems in your EIA-standard four-post rack. The two L brackets mount to the outside edges of the rack's vertical mounting rails – the edges facing the side panels – using the rails' square mounting holes. Attaching the AL-84120 to the side leaves your front and rear mounting holes free for equipment.

The brackets support up to 250 pounds and are compatible with four-post racks with a mounting depth of 16.5 to 21.5 inches. In addition to UPS systems, the AL-84120 is compatible with other heavy networking or power protection equipment with a rectangular chassis of 17.5 inches in width. Rack-attachment hardware for square-hole mounting is included.

Features

Extra Support for Heavy UPS Systems

- Installs on outside edges of rack's vertical mounting rails
- Compatible with EIA-standard 4-post racks with mounting depths of 16.5–21.5 in.
- Leaves front and rear mounting holes free for equipment
- Supports up to 250 lb.
- Also supports other heavy networking or power protection equipment 17.5 in. wide
- Rack-attachment hardware for square-hole mounting included
