

AL-85732

Mechanical Column Scales with BMI Display

- Quick and easy ascertainment of BMI.
- Simultaneous evaluation of nutritional condition.
- Clearly designed dial and low platform.

The intelligent all-round solution.

This dial column scale can do something other mechanical scales can't: determine the Body Mass Index (BMI) at the same time as weighing. The BMI is recognized by the World Health Organization as being the indicator of one's individual nutritional condition. When fitted with the measuring rod, the dial scale becomes an all-in-one mechanical weighing and measuring station. The elegant all-round solution is especially suitable for use in the general medical sector in doctors' surgeries and hospitals. At the same time, it is a comfortable instrument for health-care workers all around the world. When installed in pharmacies and fitness studios, it provides an exclusive additional service for customers.

Quick and easy ascertainment and evaluation of BMI.

Underweight, normal weight, or overweight? For the first time, the AL-85732 answers these questions mechanically: when the patient mounts the scale, a "BMI disc" is set in motion just below the very precise weight displayed in the large dial. The disc is visible in a small window next to which a height scale is printed. The BMI can now be quite easily read off from this height scale. The colored sectors of the BMI disc provide information on how the ascertained BMI is to be interpreted, on whether the patient is underweight, overweight or of normal weight. If there is uncertainty in regards to the patient's height, this can be determined precisely in just one step with the optional integrable telescopic measuring rod. It is hardly possible to be quicker and more precise.

Clearly designed dial and low platform.

When designing this elegant scale, special attention was paid to the ergonomics. The dial which is tilted slightly towards the observer is particularly large and clearly laid out, making it easier to read. The AL-85732 is easy to mount as the platform is very low. The tread area is so large that even tall and heavyweight patients have sufficient space. The tread area is also covered with a nonslip rubber mat for safe footing.

Mobile with integrated transport casters.

Thanks to the integrated transport casters, the AL-85732 is easy to move around and has no problems with uneven surfaces due to its adjustable leveling feet.

The separately available measuring rod permits simultaneous weighing and measuring.

It is easy to determine BMI with the colorcoded dial.

AL-85732

Technical Data

- Capacity: 350 lbs / 160 kg, 160 kg
- Graduation: 1 lbs / 500 g, 500 g
- Dimensions (WxHxD):
14.2 x 39.4 x 24.7" /
360 x 1,000 x 628 mm
- Dimensions/platform (WxHxD):
13.2 x 3.1 x 13.6" / 335 x 80 x 345 mm
- Weight: 39.9 lbs / 18.1 kg
- Functions: BMI, reset-to-zero function
- Optional: measuring rod
