How to Use the StandUp Walker

AL-83903

While in a seated position, be sure the StandUp Walker is within reach of the user.

How to Fit the StandUp Walker

Step 1. When the user is standing, adjust the height of the handles so that they are even with wrists of the user.

Step 2. To adjust the handle height, first unlock the snap collars, then press the spring-loaded push button in and adjust the height up or down.

Step 3. Once the arm has been properly adjusted, be sure to secure the snap collar for stability.

Step 1. To engage for use, lift up on each of the two levers in the middle of the unit simultaneously to release the security pins. The StandUp Walker will then drop to the lower ergonomic position.

Step 2. Pull the walker as close as possible so that the skis are positioned under the seat. There are three different hand positions: pistol, medium and the recommended ball-joint grips.

How to Fold the StandUp Walker

Step 1. Release the snap collar on each arm. Press the corresponding push button and turn the telescoping arm so that the handle is towards the middle of the frame. Then secure the snap collar. This will keep the arms from rotating during transport. Repeat with second arm.

Step 2. To fold the legs, turn the StandUp Walker sideways on its frame. Push the button on the leg and rotate the leg 180 degrees to the corresponding hole location. Repeat with other leg. Each leg should contour the wheel for a compact travel fit.

PRECAUTIONS:

Do not use on stairs, moving sidewalks or escalators.

BE AWARE OF OBJECTS AND OBSTRUCTIONS DURING USE.

Step 3. As the user rises, their weight can be placed entirely on the StandUp Walker.

Step 4: Once standing, lift the StandUp Walker using the ball-joint grips attached to the handles. The hinges will automatically secure when lifted into the standing position. Listen for the audible click sound before engaging the StandUp Walker for mobility.
