

SunOne™ SYSTEM

ALCO® Sales & Service Co.

One time. SunOne is a complete single patient use fiber optic laryngoscope system that prevents the risk of cross-contamination commonly associated with reusable blades and handles. Each SunOne component is sterile and individually packaged, ready for patient use.

One choice. The SunOne System features eight types of disposable fiber optic blades in a variety of sizes for both routine and difficult adult and pediatric intubations. And all blades are compatible with the single patient use LED handles.

With the large selection of laryngoscope blades, facilities can easily eliminate reprocessing costs for reusable laryngoscopes when choosing the SunOne System.

One solution. Without compromising performance, quality, or reliability, the SunOne System is the one solution for optimum patient care that is both smart and affordable. Learn more: info@alcosales.com
