CLEARANCE

Intuitive, Durable, Versatile: Beata Clasp

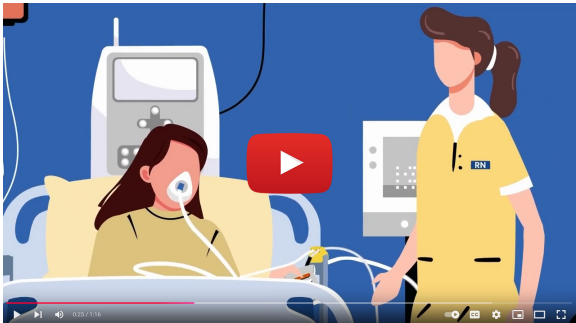

Reduce the risk of adverse incidents and contamination by **keeping lines easily traceable and off the floor.**

Top 10 Benefits:

- 1. Eliminates tangling of tubing
- 2. Keeps call light in reach
- 3. Versatility & ease of use
- 4. Keeps lines off floors
- 5. Decreases contamination
- 6. Lowers infection rates
- 7. Reduces waste & rework
- 8. Saves time at the bedside
- 9. Prevents fall of patients & staff
- 10. Reduces errors & misconnections

ECRI’s 2025 Top 10 Health Technology Hazards report identifies a circumstance where infusion lines are allowed to dwell on the floor. This creates a tripping hazard that can lead to patient or staff injuries from a fall, as well as patient harm if the infusion line becomes dislodged. Staff should check infusion lines to ensure that they are not on the floor. Additionally, facilities may consider using a catheter securement product, such as **Beata Clasp**, to decrease the risk of dislodgement.

Functional throughout every stage of recovery
