

Galvanized Round Bucket & Zinc - Plated Downpress Wringer

GALVANIZED ROUND BUCKET

The Galvanized Round Buckets have more usable capacity than oval buckets and are more durable than plastic buckets.

An industry standard for over 70 years! Our buckets are stronger because they are hot-dip zinc galvanized after the bucket is formed. Bail ears are welded below the rim to prevent interference with the wringer. A heavy wire reinforcement is formed into the top rim for added strength. Each perimeter-reinforcing rib indicates a one-gallon increment. All models with 2" casters include high-density, reinforced nylon spiders attached without rivet or bolt holes. Bumpers optional.

ZINC - PLATED DOWNPRESS WRINGER

The original and best downpress wringer design, invented over 80 years ago and improved ever since.

Simple, one-stroke operation makes the Zinc-Plated Downpress Wringer up to three times more efficient than other designs.

Features include a solid steel gear shaft for durability; double-staggered metal gears for solid, slip-proof operation; and long-wearing steel bushings where the gear shaft enters side plates. Welded and riveted construction, plus zinc electroplating, makes these wringers as long-lasting as they are effective. Our zinc-plated downpress wringers are offered in three sizes:

Floor-Knight®, Floor-Prince® and Floor-King®.
